

Auto ID Single Source Solutions

Auto ID enables automatic data output, transfer and capture through bar codes. NCR's Auto ID Solution is a bar coding solution developed for manufacturing and distribution environments where speed, accuracy, consistency, validation and compliance to customer mandates are required.

NCR Auto ID Single Source Solutions

NCR's Auto ID Program

- Creates customer specific consumable solutions
- Provides one point of accountability
- Delivers bar coding systems and technical support
- Reduces the overall cost of your automatic identification system
- Increases equipment up-time

Thermal Transfer Ribbons & Labels

NCR guarantee consistent, reliable barcode media systems with 100% verification. NCR manufactures both thermal transfer ribbons and labels.

Label Management Programs

NCR can help standardize multiple applications, help you choose the right printing technology, determine whether in-house printing or outsourcing is most cost effective, manage inventories, and setup electronic ordering and information interchange.

Printers

Our Auto ID Specialists can recommend the best printing technology for your application. NCR is an authorized Zebra reseller and can provide a variety of other brands, printer accessories and reconditioned printers.

Printer Maintenance

We offer service options for thermal printers, including on-site and depot programs. NCR can even help facilitate trade-ins on old equipment.

Label Design Software

We have the tools to help design formats, pull information from existing databases, integrate printers into existing networks or create stand alone printing locations.

RFID

NCR's RFID solution for supply chain compliance is developed for consumer and package goods manufacturers that need to meet with retailer requirements for RFID marking at the case and pallet level.

NCR ServicePLUS

NCR offers a toll free technical support service dedicated to solving your thermal printing needs. With over 45 thermal printers in our R&D labs, our technicians can duplicate and solve virtually any situation effecting print quality and we boast over 95% resolution on the 1st call.

R&D Services

NCR's R&D Services can provide Material Analysis Reports(MAR) that are used to analyze and identify label and ribbon materials, measure print quality, and help make material recommendations. MARs provide in depth analysis of bar code and print durability(scratch,smear,chemical resistance, density, and scannability) and thermal transfer ribbon static content. This type of information is very important in determining the effectiveness of any labeling application, identifying and measuring cost saving alternatives as well as identifying potential print head damage.

Automatic Application

Whether you desire on-line print and apply systems or only applicators we can help. Site surveys help determine the best solution for you.

Peripherals

NCR can provide data collection solutions, radio frequency systems as well as other devices.

- Scanners (fixed and handheld)
- Wireless LANs
- Mobile Devices

NCR Auto ID Single Source Solutions

Products

- Thermal Transfer Ribbons
- Labels/Tags: Thermal Transfer and Direct Thermal
- Laser Cartridges
- Forms/FuseForm™
- Label Design Software
- Printers
- Scanners
- Wireless Equipment
- Print and Apply Equipment
- Peripherals
- Cleaning Cards
- Printheads

Services

- NCR eMedia
 - Consumables Consulting
 - Customer Setup
 - Product Sourcing
 - Product Logistics
 - Reporting & Reviews
 - Order Management
 - Billing Services

- eProcurement
 - EDI Ordering and Billing
 - Online Order Management
 - Electronic Integration
- Customer Service Center
- Service**Plus** (technical service hotline)
- Systems Integration
- Printer Maintenance
- Product and Print Technology Selection
- Material Analysis (R&D Services)

NCR Auto ID Specialists

Will recommend innovative solutions in areas where BarCode Technologies can reduce costs and improve your operations.
